Subject	New enquiry — 4 full 20' containers, delivered Walvis Bay, Namibia	Reply by	As soon as you can — the customer is selecting now

Ramon,

I have just received a new enquiry and I want you to price it with me.

The customer is a **major glass distribution and installation group in Southern Africa**, with a network of branches across several countries. They run their own float plant in the region, but they buy laminated glass from outside — and they are **selecting their suppliers right now**. They have asked me for a price **CIF Walvis Bay, Namibia**, with the freight shown on a separate line.

WHAT THEY ARE ASKING FOR

One full 20' container per product, cut to the finished sizes below.

#	PRODUCT	MAKE-UP	FINISHED SIZE	QUANTITY
1	Clear Float	4 mm, Grade A	1830 × 2440 mm	1 × 20' full
2	Clear Laminated	6.38 — 3 + 3 + 0.38 clear PVB	2440 × 2000 mm	1 × 20' full
3	Grey Tinted Laminated	6.38 — see note below	2440 × 2000 mm	1 × 20' full
4	White Translucent Laminated	6.38 — white translucent PVB	2440 × 2000 mm	1 × 20' full

WHAT I NEED FROM YOU, LINE BY LINE

- **FOB price per m²** and the **total per 20' container**
- **CIF Walvis Bay, Namibia** — with the **freight on a separate line** (the customer asked for this explicitly)
- How many **m²** and how many **sheets** you load per 20'
- **Production lead time** and your earliest loading slot
- **Payment terms**, and how long the price stays valid
- Can you load **Open Top with crane lifting** if the customer asks for it?
- Which **certificates** come with the goods

TECHNICAL POINTS — PLEASE READ BEFORE QUOTING

- 1. Cut to size, not jumbo.** Please quote these as **finished sizes produced to measure**. Cutting 2440 × 2000 out of a 3210 × 2550 jumbo wastes about 40 % of the sheet and the price would be out of the market before we start.
- 2. The grey tinted is ambiguous.** Is it **body-tinted grey float** (3 mm grey + 3 mm clear), or a **grey PVB interlayer** between two clear? **Please quote both** — I will confirm with the customer which one they mean.
- 3. The white must be translucent**, not opaque. White / opal translucent PVB, 0.38 mm.

AND ONE THING, RAMON

Give me your very best price on this one. These are serious, well established companies — not a one-off buyer. They move volume every month, they are picking their suppliers for the coming period, and if we win this first order the repeat business follows behind it.

I would rather come back to them with a sharp number straight away than negotiate three times. Price it as if the whole account depends on it, because it does.

Thank you — and please come back to me quickly.
